

Behavioral Addictions is a timely landmark achievement and a must read for anyone interested in addictive and compulsive behavior and its treatment. Rosenberg and Feder have brought us leading addiction experts, who clearly present the growing evidence for including behavioral addictions in the DSM-5 and how best to treat them. While gambling is the first to be included in the DSM-5 chapter on substance related disorders, other behavioral addictions are likely to follow as evidence grows. This is the most important new textbook in addiction psychiatry in recent years. - Richard Frances MD, Founding President, American Academy of Addiction Psychiatry

DSM-V broke new ground in May of 2013, designating a new disorder called behavioral addiction. Clinicians immediately wanted to know: how is a behavioral addiction different from an impulse control disorder? What are the criteria for determining that some behaviors are addictions rather than impulses? What, if anything, does this mean in terms of effective treatment? Behavioral Addictions is the first and most authoritative text ever written on the subject of behavioral addictions. This comprehensive work explains the criteria used to determine addiction, the evidence for identifying assorted behaviors as addictions, and the evidence-based treatment for each. With contributions from preeminent experts covering an exhaustive list of behavioral addictions, this book is unique in its coverage of behavioral addictions, their criteria, and treatment. It is a valuable and timely resource for any clinician treating addictions.

A guide to understanding the new DSM-V designation of behavioral addiction  
Defines the criteria for behavior to be considered an addiction designation  
Discusses the evidence for behaviors meeting addiction criteria  
Identifies what is now, likely will be, and is not a behavioral addiction per evidence  
Discusses behaviors formerly considered impulse control disorders  
Presents evidence-based treatment for each behavioral addiction
