

The female inmate population in the United States has exploded in the past two decades, increasing nearly six-fold. The U.S. correctional system, however, has not expanded its health care to provide for this growing population of women. This comprehensive reader addresses the physical and mental needs of women inmates and suggests that they cannot be properly treated unless their lifestyles before, during, and after incarceration are considered. This book abounds with statistics that outline the unique needs of the female inmate population. For instance, a significant proportion of female inmates suffer physical and sexual violence before serving time. Incarcerated teenagers are more likely than others from their age group to have engaged in behaviors that increased their risk for contracting sexually transmitted diseases like HIV. Because African American women are more likely than their counterparts to encounter prison time, their needs warrant specific attention. Bringing together twenty original essays, this volume will be invaluable for lobbyists and policy makers as well as for graduate students and faculty in the fields of criminal justice and public health.

Introduction to Logic: Predicate Logic (2nd Edition), The Traad Tritons, Soul Music, Captain Stoneheart and the Truth Fairy, A Ringing Glass: The Life of Rainer Maria Rilke,
